### REACT SHOPPING APP

#### Demo Version

The demo version is built on API Sendo with the most basic functions of a shopping website.

API Sendo used to free for my school until I saw Cors Policy on Console. That means they have taken the copyright back and I can't know exactly Url of the API to get data of other pages.

Functions of website :

- Searching products
- Add to cart
- Filter products
- And some small functions...

Because I am a newbie so I don't have ideas to build perfect version.
